

Preferred Order of Selections to navigate from broadest category to most detailed products

For a detailed list of Products and their HS Codes, refer to the HS Code/Commodity Name list at the end of this guide

2.1 Filters

Reset Filter

The Reset filter at the left top corner of the dashboard will clear all selections made in the Product Category panels. This filter is essential to restore the Product Category panels and Trend panels to their original layout with all categories and products visible.

- *Reset filter will not apply to the Commodity panel if the Search bar is active.*
- *The Reset Icon is functional. **Double/Triple click the icon only** to reset the filter.*
- *If the above action does not work, then refresh the page.*

Flow Filter

The Flow filter at the top right of the dashboard allows users to select either Imports or Exports of products traded between India and China. This filter works on the Product Category panels and the Index panels. It will not apply to the Trend panels as these panels already include values for both imports and exports.

Year Filter

The Year filter at the top right of the dashboard allows users to select the Year, between 2011 to 2021. Accordingly, the Product Category Panels and the Index panels will display values for the Year selected. It will not apply to the Trend panels as these panels include values for all years.

Search Filter

The Search filter applies only to the Commodity (HS-8) panel and not to any other panel on the dashboard. It allows users to search for specific product names as per HS-8 commodity names. It will display all relevant results irrespective of their classification at the HS-6, HS-4 or HS-2 levels. **For the best use of the search function, refer to the HS Code/Commodity Name list given below.**

Some pointers to use the search filter:

- Hit Enter to execute the search.
- The Icon to the right of the search bar is not functional, only representative.
- The Reset filter will not clear the Search filter.
- To clear the Search filter, remove text in the search bar and click outside the dashboard/panel.
- The search function is not case sensitive and will return exact matches.
- Some results may be omitted due to differences in spelling of the product names.

3. Indices

3.1 Import Intensity Index

Import Intensity indicates whether a country (India) is importing more or less than it normally would from another trading partner (China). A value of less than 1 indicates that a country (India) is importing less from its trade partner (China) than could be expected from the world average. A value of greater than 1 show that a country (India) is importing more from its trade partner (China) than could be expected from the world average. A value of 1 indicates no bias towards the trade partner.

3.2 Export Intensity Index

Export Intensity indicates whether a country (India) is exporting more or less than it normally would to another trading partner (China). A value of less than 1 indicates that a country (India) is exporting less to its trade partner (China) than could be expected from the world average. A value of greater than 1 indicates that a country (India) is exporting more to its trade partner (China) than could be expected from the world average. A value of 1 indicates no bias towards the trade partner.

3.3 Share of Total Imports/Exports

This index shows the share of China's imports/exports in India's total imports/exports to the world. The value is expressed as a percentage.

4. Notes

- Some products are spelt incorrectly or have no spaces between words, preventing them from appearing in search results. The spellings are extracted directly from the data source, and have not been altered.
- Any gaps in the figures or graphs are a result of data unavailability.
- The dashboard only includes values for the products traded between India and China since 2011 and does not include all products in India's total trade basket.
- Tooltips are visible by hovering over a specific product for Product Category and Trend panels which display detailed information about that product (Full name of product, HS code, value of import/export).

Commodity: *Othr Parts Of Telephonic/Telegraphic Apparats
HS Code: 8,51,77,090

5. HS Code Explanation

The Harmonized System (HS) is a standardized numerical method of classifying traded products. It is a commonly used system throughout the world to identify products at different levels. The HS system makes it easier to identify specific products traded under broad categories like Pharmaceuticals or Electronics. The example below illustrates how the HS system works.

Section → Chapter (HS-2) → Heading (HS-4) → Sub-Heading (HS-6) → Commodity (HS-8)

Example: Textile and Textile Articles (Aggregate Level) to Sarees (Commodity Level)

Section	Chapter (HS-2)	Heading (HS-4)	Sub-Heading (HS-6)	Commodity (HS-8)
Textile and Textile Articles	Silk	Woven Fabrics of Silk or of Silk Waste	Other Fabrics Containing 85% or More by Weight of Silk or Silk Waste Other Than Noil Silk	Sarees Containing >85% by Weight of Silk or Silk Waste Other Than Noil Silk
	50	5007	500720	50072010
